MatrixStudio
Release Date: 30 Aug, 2016

Minimum:

OS: Windows 7

Processor: Intel i5-4590 / AMD FX 8350

Memory: 4 GB RAM

Gr

English,Simplified Chinese,Traditional Chinese

Don't waste your money. It's pretty, but horrible narration that you can't actually control - the pause button just doesn't work. It's

a crap bit of VR 'education' that was released well before it was ready. Or even tested. Do not buy.. Can only view the sky from the north pole, no way to set location or time of viewing.. This is okay Feels like a WIP. Everything is super in your face, point and click $14.99 is alot for what it currently is. This has potential to be crazy beautiful, I hope it will be worked on and updated.. https://www.youtube.com/watch?v=cm8rPbii-g. Don't waste your money. It's pretty, but horrible narration that you can't actually control - the pause button just doesn't work. It's a crap bit of VR 'education' that was released well before it was ready. Or even tested. Do not buy.
